

Technical Courier

Critical Courier

echo's Technical Courier Service operate as a virtual field engineering team that works in partnership with our clients to provide an integrated part of the service offering.

Having undertaken the initial diagnosis, you forward the call details to echo's service centre based in Milton Keynes. A Technical Courier and spare part will then be scheduled for dispatch to resolve the issue at the business or residential location.

Working with echo's project team, your engineers create detailed scripts that document all the actions and work practises which echo personnel need to ensure a successful operation.

Working to specific Service Level Agreements, a range of various response times are available from 2, 4, 6, and 8 hour calls or Nextday.
